

## Freehand® Herbicide

### Your Superior Solution for Weed Control

**Freehand Herbicide** is an innovative pre-emergent herbicide that combines two powerful active ingredients: dimethenamid-P and pendimethalin classified as Groups D and K. This unique combination allows Freehand to control over 60 different weed species, making it a superior choice for your pre-emergent weed management program.

**Freehand Herbicide is the benchmark with over 60+ weeds on label, why settle for less?**

**Flexibility and Broad Spectrum:** Freehand offers a level of flexibility and a broad spectrum of weed control that is unmatched by other pre-emergent herbicides on the market.

**Higher Quality Plants:** Growers can expect higher quality and more marketable plants due to effective, long-lasting weed management.

**Labour and Time Efficiency:** By reducing the need for frequent manual weeding, Freehand contributes to significant labour and time savings.

Growers across the country have trusted Freehand Herbicide season after season as the benchmark in pre-emergent control. Here's why our growers love this solution – unmatched weed management and labour optimisation in one broad spectrum product!

**Freehand**  
Herbicide

"Having personally grown and weeded the cut flowers and beds for the past two years, I can highly recommend Freehand. Last year I weeded weekly – often having to use labour-hire staff to help me with weed control. This year, having used Freehand as a pre-emergent weed control, I could manage it myself in hardly any time, not having to employ help with this aspect of the trial at all."

Lindsay Jenkinson,  
Ball Australia

### Why settle for less?

Product	AI	Weed Spectrum
<b>Freehand</b> Herbicide	Pendimethalin & Dimethenamid-P	<b>60+ weeds</b>
Barricade	Prodiamine	15 weeds
OH2	Oxyfluorfen & Pendimethalin	8 weeds

 **Choose Freehand!**

**BASF**  
We create chemistry

Trials confirm Freehand Herbicide not only provides significantly longer control compared to competitors with equivalent claims, but it also sets the benchmark as the most broad-spectrum solution.

## Freehand provides consistent, long-lasting control compared to competitors

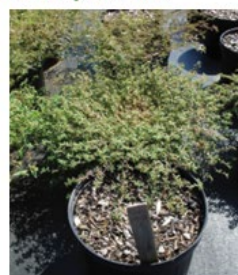

Untreated Control

Freehand, 100kg/ha

480g/L Proflam, 2L/ha

20g/kg Oxadiazon, 200kg/ha

Freehand Herbicide applied at 10g/m²

20g/kg Oxadiazon applied at 10g/m²

*\*Photos taken 10 weeks after treatment.*

Freehand Herbicide reliably controls more than 60+ labelled weeds, exceeding the claims of competitor pre-emergent herbicides registered with similar claims.

Untreated

Freehand 170kg/ha

OH2 110kg/ha

*\*Seeded 0 & 2 weeks after treatment. Photos taken 6 weeks after.*

\* Weeds treated: Crabgrass (*Digitaria* spp.), Rice Flat Sedge, Eclipta, **Spotted Spurge**

\* Note – **Crabgrass (*Digitaria* spp.), Spotted Spurge** listed on OH2 label

Freehand Herbicide is a competitive and favourable investment when compared to other herbicides, which often have narrower weed spectrum or limited residual control.

Combining efficacy, flexibility, and cost-effectiveness, Freehand Herbicide is an ideal choice for those looking to enhance their weed management strategies and promote healthier plant growth.

**Why settle for less, or invest in multiple products to implement an effective pre-emergent program?**
