Choosing Xzemplar for confidence under pressure

Xzemplar fungicide, powered by BASF's Xemium[®] technology, sets a new benchmark for Group 7 fungicide chemistry. It delivers broad-spectrum preventive and curative control with consistent performance on turf under pressure, supporting modern programs facing higher expectations and limited recovery windows.

Broadest spectrum Group 7 fungicide

- Foliar speed plus root reach makes Xzemplar a true workhorse within rotational programs
- Controls 12 turf diseases, providing at least 50% broader spectrum coverage than comparable Group 7 fungicides

Unmatched rapid knockdown of disease

- Industry leading speed of control, in as little as four days after application
- Strong option when pressure escalates and rapid intervention is required

Suitable for use near sensitive areas

- No buffer zones to bystanders, aquatic areas, pollinators, vegetation or livestock*, providing operational flexibility
- Designed for practical application to sensitive areas

Why choose Xzemplar?

Xzemplar combines rapid curative activity, broad disease coverage and rotational value, giving turf managers an effective rotation partner that supports performance without compromising budget discipline.

Xemium technology actively disrupts fungi across almost all stages of the disease life cycle from the first application, unlike older azole, strobilurin or carboxamide chemistries. Its systemic movement and extended activity underpin consistent, reliable performance under pressure.

As the broadest spectrum Group 7 turf fungicide, Xzemplar offers one of the few registered technologies available to support the preventative management of ERI diseases, including *Magnaporthiopsis* and *Wongia* spp.

*When boom height is ≤ 0.5 m – refer to full label directions.

Suggested seasonal fungicide program framework

Modern turf disease management requires more than individual product decisions. As disease pressure, resistance risk, and performance expectations continue to increase, well planned seasonal programs built around rotation are essential to maintain consistent results over time.

The following suggested seasonal framework illustrates how the **BASF fungicide range** can be integrated across the year to align product strengths with periods of highest risk. By rotating technologies and positioning products at preventative and early curative application timings where they perform best, turf managers can reduce reliance on any one chemistry, protect long term fungicide performance, and improve consistency across the season.

- Understand which diseases are managed **preventatively versus curatively**
- **Apply disease-specific rates** and observe correct application intervals
- **Rotate with alternative chemistries** to manage resistance

What turf managers are saying

Feedback from the field highlights the value of fungicides that perform under pressure, fit within rotation programs, and support consistent disease management without adding unnecessary complexity or cost. This is why they choose Xzemplar.

"It's a great product. I would not have expected any fungicide to hold off everything, but Xzemplar has held up. I will use it again. It's great that it gives me another rotational option that doesn't blow my chemical budget."

Jesse Bartlett,

Managing Director, Sports Turf Specialists Pty Ltd
